

Empty Homes Collaborative

Why?

The legal system is not working
in the field of housing rentals.

This is a major **impact on the**
climate, housing , and territorial
imbalance crisis.

There are more than **100 million** empty homes
in just **33 countries** around the world

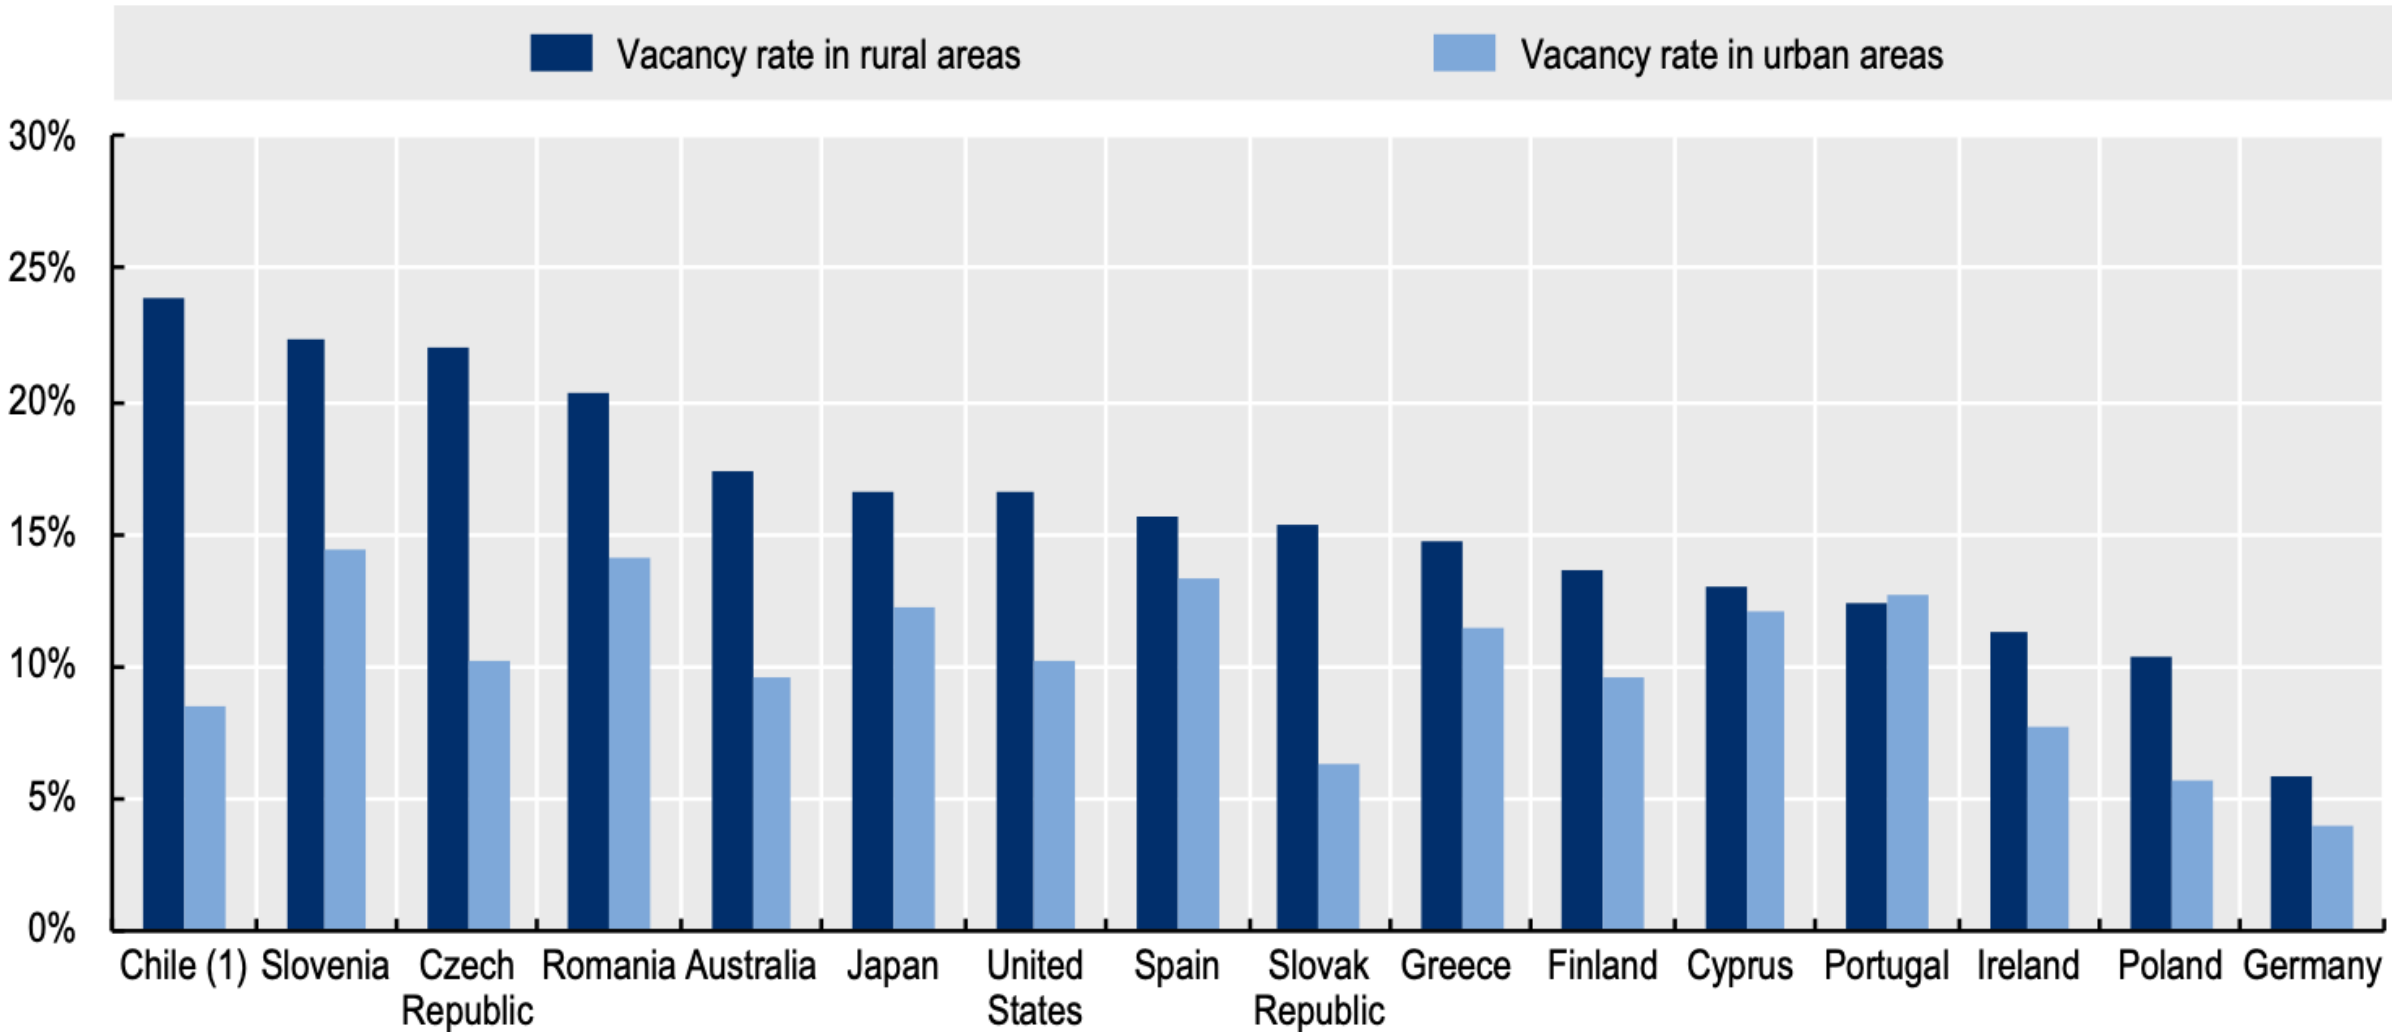

Figure HM1.1.2.b: Vacant dwellings in urban and rural areas, selected countries
Percentage of vacant dwellings located in urban and rural areas, 2020 or latest year available.

Source Paper 2024

What for?

Increasing the housing supply by making use of the existing Spare stock is a clear example of **circular economy**.

Each home that is reused has an impact equivalent to planting 4,000 trees, instead of building a new 90 m² home in the city.

Intergenerational co-housing

Together, the Boomerang Generation and other generations build mutual support systems that bridge generational and cultural gaps.
